

sage One

Sage One: simple cloud accounting

Sage One frees you from business admin with clever features built around your needs—so you can focus on doing what you're good at. You'll no longer need to log in and out of different systems—meaning huge time savings. Information can flow directly to your final accounts and tax applications without rekeying data—reducing errors and speeding up your submission process.

Here's why you will love Sage One

Sage One is a simple, easy-to-use cloud accounting solution designed for start ups and small businesses. And now Sage One is more powerful than ever.

Accounting made easy

Sage One enables you to run your business professionally with intuitive features that make accounting simple and straightforward, even for people with no experience of accounts. When you need your accountants' support.

Speedier daily activities

Sage One is a great step up from spreadsheets and desktop accounting solutions. You will spend less time inputting transactions, while a range of built-in dashboards and reports help you understand your current status and cash flow in real time. Automated bank feeds and built-in error checking reduce the workload for you and your accountant.

Compliance at all times

Sage One keeps you on top of the rules and regulations for your business. Automated data imports and credit card/bank reconciliations prevent input errors and ensure consistency. Because Sage One is cloud-based, your systems will always be up to date with the latest regulation changes, without installing any updates.

Work anywhere with Sage Expenses and Invoices app

You can download and immediately start using the app to track expenses, invoices and see business summaries. You can also sync Sage One with Pegg—the world's first accounting chatbot available in the top mobile and web messenger platforms. It's an easy way for you to manage your business and make decisions from anywhere, anytime.

The screenshot displays the Sage One Accounting software interface for creating a new sales invoice. The form includes fields for Customer, Invoice Date, Due Date, Reference, Invoice Address, and Delivery Address. Below these fields is a table for line items with columns for Product/Service, Description, Ledger Account, Quantity, Price/Rate, Discount, VAT Rate, and Total. The bottom section contains fields for Notes, Terms and Conditions, Carriage, Amount, Amount Ex-VAT, Total VAT, and Total. A 'Save as Draft' checkbox is also present.
